Deksmart Project Profile

Deksmart Product
68mil Dove Grey

Completion Date
July 2016

Location
Calgary, AB

Overview

This large common area roof-deck in a new high profile office building in Calgary was completed with a urethane deck coating that was afflicted with water leakage and drainage issues almost immediately upon completion. The Heritage Deck & Rail team were contracted to remove the failing coating, re-slope the subfloor and install a new Deksmart waterproof deck system. The extensive renovation was completed beautifully with new 68mil Dove Grey decking, along with new wall flashings and a positive drainage system with new scuppers and floor drains.
